

Galp to start Namibia offshore seismic acquisition

- **The seismic survey in the PEL83 Offshore License comprises an area of around 3,000 km² in Namibia's deepwater offshore**
- **The survey is scheduled to start January 25 and end in March**

Galp will start on January 25 a 3D seismic campaign in Namibia's Deepwater Offshore Licence PEL83 in the Orange Basin. The survey, contracted to Polarcus UK Ltd., will comprise an area of around 3,000 km² and should to be completed in March.

The PEL83 license, awarded in August 2016 by the Ministry of Mines and Energy to a Galp-led consortium that also includes the National Petroleum Corporation of Namibia and Custos Energy, covers a total area of around 10,000 km².

The area is located approximately 260 km from Lüderitz in what is considered a "Frontier Exploration Basin."

About Galp

Galp is a publicly held, Portuguese-based energy company, with an international presence. Our activities cover all stages of the energy sector's value chain, from prospection and extraction of oil and natural gas from reservoirs located kilometers under the sea surface, to the development of efficient and environmentally sustainable energy solutions for our customers – whether large industries that seek to increase their competitiveness, or individual consumers that seek the most flexible solutions for their home and mobility needs. We also contribute to the economic development of the 11 countries where we operate and to the social progress of the communities that welcome us. Galp employs 6,389 people.
